

Complete Restaurant & Bar Management Software

Smarter Operations

Faster Service

Higher Profit

INTRODUCTION

RiteEats is a powerful, next-generation Restaurant & Bar Management Software designed to automate and optimize every aspect of food business operations — from front-desk billing and kitchen coordination to inventory control, recipe costing and complete financial management.

Built for

Restaurants

Cafés

Bars

Clubs

Food courts

Fast food outlet

Multi branch food chain

RiteEats eliminates manual errors, prevents stock leakage, improves service speed, and delivers real-time business intelligence for confident decision-making.

Works on

Touch Screen POS Terminals

Desktop POS Systems

Android & iOS Tablets

Handheld Captain / Waiter Devices

Every order, every item cooked, every payment received and every stock movement is tracked in real time, giving complete visibility and total control to business owners and managers.

CORE KEY FEATURES

Smart POS Billing & Ordering

RiteEats provides a fast, intuitive touch screen billing interface that supports dine-in, takeaway and delivery operations. Multiple payment modes such as cash, credit, card, cheque and mobile money are supported. It allows handling of service charges, discounts, complimentary items, modifiers, toppings and accompaniments, as well as off-menu items and time-based menus for special offers or happy hours.

Complete Table & Area Management

With RiteEats, you can manage multiple dining areas and table layouts effortlessly. The system supports table split, merge and shift functionalities to handle group seating, table changes and combined bills. Real-time table occupancy tracking and waiter-wise table assignment give clear visibility of floor operations and performance.

Multi-Outlet, Multi-Currency Capability

For groups and chains, RiteEats supports centralized management of multiple outlets, kitchens and bars. Consolidated reporting provides a clear view of sales and stock across all locations. The system also supports multi-currency billing for operations dealing with international customers or foreign currency payments.

Security & Control

RiteEats comes with strong security features including role-based user access, advanced till security and a complete audit trail of critical operations. This helps prevent unauthorized access and ensures accountability for all transactions.

Advanced Kitchen & Bar Automation

RiteEats ensures smooth coordination between the cashier, waiters and the kitchen or bar through integrated KOT handling. Orders are automatically routed to the correct kitchen or bar via remote KOT printing, reducing miscommunication and delays. Recipe time tracking and proper KOT management help the kitchen prioritize orders, minimize preparation time and improve overall service speed.

Powerful Inventory & Recipe Control

RiteEats offers multi-warehouse stock management with support for multi-unit items (e.g. bottles, glasses, cases). Inventory is updated automatically based on recipes and sales. Reorder level alerts, detailed stock reports and recipe costing ensure tight control on stock movement and food cost, reducing wastage and pilferage.

Promotions, Offers & Marketing

Flexible promotion and discount management allows setup of time-based offers, happy hours and special campaigns. Integrated loyalty and promotional tools help increase repeat visits and improve customer retention.

Taxation & Compliance

Automatic VAT / tax calculations and comprehensive sales and tax reports make compliance easier and more reliable. Day-wise, month-wise and outlet-wise reports provide the information required for statutory reporting and internal control.

ADVANCED ADD-ON MODULES

RiteEats is built on a modular architecture, allowing restaurants to start with the core version and activate advanced modules as their business grows. All add-on modules are fully integrated with billing, kitchen, stock and accounts, ensuring a single central control system.

Captain / Waiter Ordering & Billing App

This module enables captains and waiters to take orders directly at the guest table using Android or iOS handheld devices or tablets.

- Table-side live order entry
- Instant KOT transmission to kitchen and bar
- Real-time table status and order updates
- Reduced manual rewriting or re-entry of orders at cashier
- Optional table-side bill preview and confirmation
- Improved coordination between service staff and kitchen

The app speeds up ordering, reduces errors, and enhances the guest experience by minimizing waiting time and ensuring accurate service.

Best for high-volume restaurants, fast food outlets, food courts and busy bars.

Kitchen Display System (KDS)

The Kitchen Display System replaces traditional paper KOTs with real-time digital order screens in the kitchen and bar.

- Live digital display of all KOT orders
- Automatic routing of orders to the correct kitchen or bar
- Color-coded order priority and delay alerts
- Display of preparation time and order aging
- Status tracking such as Preparing, Ready and Served
- Support for multiple kitchen or bar screens

By going paperless, KDS eliminates lost or unreadable KOT slips, improves communication between cashier, waiter and kitchen, and significantly increases kitchen speed and accuracy.

Best for high-volume restaurants, fast food outlets, food courts and busy bars.

Online Table Reservation System

The Online Reservation module enables restaurants to handle advance bookings and reservations efficiently, with real-time visibility of table availability.

- Real-time table availability overview
- Advance reservation booking and scheduling
- Reservation confirmation and tracking
- Peak hour and capacity control
- Integration with floor and table layout
- Reduced manual phone handling and booking errors

Customers enjoy the convenience of confirmed bookings, while the restaurant manages seating and guest flow much more effectively.

Best for fine dining restaurants, lounges, banquet venues and high-demand outlets.

Customer Loyalty Management

The Loyalty module helps restaurants build and reward a loyal customer base by implementing structured loyalty programs.

- Customer registration by mobile number or card
- Point-based loyalty system with earn and redeem rules
- Different reward slabs and tiered benefits
- Birthday and anniversary offers and campaigns
- Visit frequency and purchase history tracking
- Targeted promotions for high-value customers

This module turns walk-in customers into repeat visitors, increases average spend per visit and strengthens overall brand loyalty.

Best for restaurants, cafés, franchises and food chains looking to grow repeat business.

Event Management System

The Event Management module allows restaurants, clubs and hotels to manage banquets, private parties and corporate events directly inside RiteEats.

- Event enquiry and booking management
- Capture of client details and event requirements
- Menu planning and costing for events
- Guest count, seating and area allocation
- Advance payment, deposits and balance tracking
- Separate event-wise billing and invoicing
- Profitability and expense analysis per event

This module is ideal for managing weddings, parties, conferences, private functions and outdoor catering, providing clear control over revenue and cost.

Best for banquet halls, clubs, hotels and catering businesses.

Token & Queue Management System

This module is designed for high-traffic, fast-service environments where quick turnover and efficient crowd control are critical.

- Token generation at order or payment point
- Digital display of serving token numbers
- Automatic queue sequencing and call-out
- Separate queues for dine-in and takeaway if required
- Reduced crowding at counters and service points
- Faster order pickup and smoother customer movement

The result is a more organized service environment, reduced customer frustration and higher throughput.

Best for fast food outlets, food courts, takeaways and QSR chains.
